Thyroid Awareness
By: Caley Roahrig

Hypothyroidism
• This is a condition where the thyroid gland does not produce enough of certain hormones.
• Signs and symptoms include feelings of fatigue, increased sensitivity to cold, dry skin, thin hair, weight gain, muscle weakness, aches, and tenderness, slower heart rate, depression, and impaired memory.
• If left untreated and the gland continues to be consistently stimulated, a goiter may form, which is when the thyroid becomes enlarged.
• Myxedema can be life threatening and occurs when the hypothyroidism is advanced.
• Lab tests can show hypothyroidism.
• There are some risk factors and complications from hypothyroidism include many different health problems.

Hyperthyroidism
• This is a condition where the thyroid gland produces too much of the hormone thyroxine.
• Signs and symptoms include weight loss, tachycardia, irregular heartbeats, palpitations, increased appetite, feelings of nervousness, anxiety, and irritability, sweating, difficulty sleeping, skin thinning, and fine, brittle hair.
• Graves’ ophthalmopathy may occur, which is when the eyeballs protrude beyond the normal area.
• Risk for goiter formation and other health issues can occur as well.
• Lab tests can show hyperthyroidism.

Crock Pot Spaghetti Recipe
Rachel Sterling

Ingredients:
½ pound lean ground beef
¼ onion, finely diced
½ tablespoon olive oil
¼ teaspoon garlic powder
¼ teaspoon kosher salt
1 jar of pasta sauce
½ cup water
½ pound spaghetti noodles
¼ cup grated parmesan cheese

Prep:
1. In a skillet over medium heat, cook oil, meat, onion, garlic powder, and salt for 5-7 minutes
2. Pour ½ jar of pasta sauce and ½ cup of water into crock pot
3. Break spaghetti noodles in half and put on top of sauce
4. Add cooked meat to the crock pot, then add the cheese and second half of pasta sauce on top
5. Cover and cook on high for 2-2 ½ hours or low for 6 hours
